TECH ASSIGNMENT 3 : CREATING AN IFTTT CODE SNIPPET

Given : March 3rd

Due : March 10th

In class we learned about a software that allows you to access the API's of various programs and make automated processes (IFTTT - https://ifttt.com/) with very little coding. We also learned how to generate a tumblr account and send images and text to that account.

I would like everyone to make their own IFTTT code snippet. We will spend class time on March 10th reviewing the snippets of code.

In a word document, please post a link to your code snippet. People often make tumblr sites or web sites out of their code snippets in IFTTT, if you do that please past a link to the website in your word document. Post the Word document to the Stellar site for class.
